DEV 140 · DISCUSSION 2 · HOMEWORK 1

Build Your Homework 1 Page

Grab the template and image from GitHub, build your page with a live preview, then push it to your repo and submit it on Campuswire.

This builds on Discussion 1: same `Discussions` folder, same repo, same routine. On a Mac: use `Cmd` wherever this sheet says `Ctrl`, and Finder instead of File Explorer.

YOUR FINISHED LINK

`https://YOUR-USERNAME.github.io/dev-140-yourname-f26/discussion-2/`

your GitHub account | your class repo | this lesson's folder

```
Desktop\DEV 140 - Web Development\
└── Discussions\                ← open this in VS Code (= your repo)
    ├── discussion-1\           ← from last time
    └── discussion-2\           ← new folder you make (step 2)
        ├── index.html          ← template text pasted in (step 5)
        └── sourdough-loaf.svg  ← downloaded from GitHub (step 3)
```

Before you start ☐ Discussion 1 page is live ☐ VS Code open on `Discussions`, not a subfolder ☐ Read the rubric (page 2)

HTML ELEMENTS YOU'LL USE

HTML has dozens of **semantic elements**: tags that say what content *is*, not how it looks. You need **at least 5 different ones**. These are a good start. `<p>` and your list already count as 2, so pick **3 or more** from the right-hand table.

MUST HAVE every page needs all of these

ELEMENT	WHAT IT'S FOR	EXAMPLE
`<!DOCTYPE>` & co.	Skeleton: html, head, body	Type `!` then `Tab`
`<title>`	Text on the browser tab	`<title>Sourdough Notes</title>`
`<h1>`	Page title: **exactly one**	`<h1>Sourdough 101</h1>`
`<h2> <h3>`	Sections, then subsections	`<h2>The Basics</h2>`
`<p>`	A paragraph of text	`<p>I started baking…</p>`
`<img>`	Image; alt describes it	`<img src="…" alt="…">`
`<ul> <ol>`	A list; ol if order matters	`<ol><li>Mix</li></ol>`

USEFUL EXTRAS pick 3+ to reach 5 semantic elements

ELEMENT	WHAT IT'S FOR	EXAMPLE
`<header>`	Top intro: h1, nav	`<header><h1>…</h1></header>`
`<nav>`	Links to your sections	`<nav><a href="#…">`
`<main>`	Main content (one only)	`<main>…sections…</main>`
`<section>`	A group with its own h2	`<section id="about">`
`<article>`	A self-contained piece	`<article><h3>…</h3></article>`
`<figure>`	Image + `<figcaption>`	`<figcaption>…</figcaption>`
`<footer>`	Closing info: name, year	`<footer>…</footer>`

Also handy: `<a>` links, `<strong>` / `<em>` for emphasis, `<blockquote>`, `<aside>`.

GET THE TEMPLATE

1. **Open the class folder on GitHub.**
   Click discussion-2 on GitHub. You'll see `template.html` and `sourdough-loaf.svg`.
2. **Make your `discussion-2` folder.**
   In File Explorer, create `discussion-2` inside `Discussions`, next to `discussion-1`.
3. **Download the image.**
   On GitHub, click `sourdough-loaf.svg`, then **Download raw file** (download icon, top right). Move it from Downloads into `discussion-2`.
4. **Open `Discussions` in VS Code.**
   File → Open Folder… → `Discussions` (not `discussion-2`), so Source Control still sees your repo.
5. **Paste the template into `index.html`.**
   On GitHub, open `template.html` and click **Copy raw file** (copy icon). In VS Code, click `discussion-2`, then **New File**, name it `index.html`, paste with `Ctrl`+`V`, and save.

PREVIEW AND BUILD

6. **Install Live Server (once).**
   Extensions (`Ctrl`+`Shift`+`X`) → search **Live Server** by Ritwick Dey → **Install**. **Go Live** appears in the bottom-right status bar.
7. **Click Go Live.**
   The browser opens `127.0.0.1:5500`. Click `discussion-2/` if you see a folder list. Each `Ctrl`+`S` refreshes it: keep both windows side by side.
8. **Fill in the template.**
   Write HTML under each comment in `index.html`. Use your own topic and words; change, add, or reorder sections as needed. Use the bread image:

```
<img src="sourdough-loaf.svg"
     alt="describe what you see">
```

9. **Check the rubric**
   (page 2); fix gaps as you watch the preview.

PUSH AND SUBMIT

10. **Commit.**
    Source Control (`Ctrl`+`Shift`+`G`), type `Add HW1 page`, click **Commit**. If asked to stage all changes, click **Yes**.
11. **Sync.**
    Click **Sync Changes**. Refresh your repo on GitHub: `discussion-2` should hold `index.html` and the `.svg`.
12. **Open your live link.**
    Wait for the green ✓ in **Actions** (1–2 min), then open your finished link (top right). Pages is already on from Discussion 1.
13. **Submit on Campuswire.**
    Post your repo URL and your live link: `github.com/YOUR-USERNAME/dev-140-yourname-f26`

Use GitHub's buttons, not right-click.

Right-click → **Save link as** saves GitHub's web page, not the image. Use **Download raw file** and **Copy raw file**. If the image arrives as `sourdough-loaf (1).svg`, rename it to `sourdough-loaf.svg`.

DEV 140 · DISCUSSION 2 · HOMEWORK 1

Homework 1 Rubric

50 points. Your page is graded on **structure and meaning** only. No CSS is needed, and plain-looking is fine.

CRITERIA	FULL CREDIT	PARTIAL CREDIT	NO CREDIT
Semantic HTML Elements	**10 pts** Uses 5 or more distinct semantic elements correctly, with each element matching the content it contains.	**6 pts** Uses 3–4 semantic elements, or uses 5 but some are misapplied or overly generic elements are used for main structure.	**0 pts** Fewer than 3 semantic elements used, or page is primarily built with div/span with no meaningful semantic structure.
Heading Hierarchy	**10 pts** Headings follow a logical outline: one h1 for the page title, h2 for sections, h3 for subsections. No levels are skipped.	**6 pts** Heading hierarchy is mostly correct but has one issue: a skipped level, more than one h1, or a heading used for visual size rather than structure.	**0 pts** No clear heading hierarchy: headings are missing, all the same level, or chosen arbitrarily for font size.
Image with Alt Text	**10 pts** At least one image is embedded using the img element with a descriptive alt attribute that conveys the image's content or function.	**6 pts** Image is present but alt text is missing, empty when it should describe content, or too vague to be meaningful.	**0 pts** No image present, or image is broken and alt text is absent.
List Element	**10 pts** Page contains at least one ul or ol with li items used for genuinely list-like content (not just for indenting text).	*No partial credit*	**0 pts** No list element is present, or list markup is used for content that is not actually list-like.
Valid Document Structure	**10 pts** File opens with <!DOCTYPE html>, includes html, head (with a descriptive title), and body tags, all properly nested.	**5 pts** Boilerplate is mostly present but one required structural element is missing or incorrect.	**0 pts** File is missing multiple required structural elements or is not valid HTML.

WHAT THE GRADER CHECKS, IN PLAIN WORDS

- ☐ **Your page loads.** Your repo has an `index.html` that starts with `<!DOCTYPE html>` and has `<html>`, a `<head>` with a `<title>`, and a `<body>`.
- ☐ **Headings form an outline.** One `<h1>` for your topic, `<h2>` for each section, `<h3>` inside a section. Never skip a level to make text bigger or smaller.
- ☐ **A list for list-like content.** At least one `<ul>` or `<ol>` holding things that really are a list, like steps or favorites. Not used just to indent text.
- ☐ **5+ semantic elements, used for meaning.** Pick each tag for what the content *is*, not how it looks. Common ones: `header`, `nav`, `main`, `section`, `article`, `footer`, `p`, `ul`, `ol`.
- ☐ **One image with real alt text.** The `alt` says what's in the image or what it's for. `alt="bread"` or `alt="image"` is too vague. *(Purely decorative images may use `alt=""`, but you need at least one real description.)*
- ☐ **One slip costs some points, not all.** You lose the most for a page that won't load, a repo the grader can't open (make it **Public**), or a page built mostly from `<div>`s.

IF SOMETHING GOES WRONG

Before you submit: open your live link in a private browser window. If it loads there with the image showing, the grader will see it too.

YOU SEE	DO THIS
No Go Live button	Do step 6, then `Ctrl`+`Shift`+`P` → **Reload Window**.
Folder list or "Cannot GET"	Click `discussion-2/`, or right-click `index.html` → **Open with Live Server**.
Image is a broken icon	Keep the `.svg` next to `index.html`; `src` must match its name exactly.
Nothing in Source Control	**File** → **Open Folder...** and pick `Discussions`.

YOU SEE	DO THIS
Pasted code is partial or has extra text	Delete it all, then use **Copy raw file** instead of selecting text.
Preview doesn't change	Save with `Ctrl`+`S`; it only reloads on save.
404 at `/discussion-2/`	Wait for the green ✓, then `Ctrl`+`F5`. Is the file named exactly `index.html`?
Terminal asks for a password	Press `Ctrl`+`C`; sign in through the VS Code browser popup.
