DEV 140 · DISCUSSION 3 · CSS HOMEWORK

Style Your Homework 1 Page

Practice on the sourdough page with a CSS starter template, then give your own Homework 1 page a linked stylesheet.

Same `Discussions` folder, same repo, same routine as Discussion 2. We cover three things only: **colors**, **font sizes**, and **spacing**. On a Mac: use `Cmd` wherever this sheet says `Ctrl`.

YOUR FINISHED LINK

`https://YOUR-USERNAME.github.io/dev-140-yourname-f26/discussion-2/`

your GitHub account | your class repo | your HW1 folder

```
Desktop\DEV 140 - Web Development\
└── Discussions\              ← open this in VS Code (= your repo)
    ├── discussion-1\
    ├── discussion-2\         ← your HW1 page (the homework)
    │   ├── index.html        ← add the <link> (step 10)
    │   ├── style.css         ← NEW: your CSS (step 9)
    │   └── sourdough-loaf.svg
    └── discussion-3\         ← in-class practice (step 2)
        ├── index.html        ← from GitHub (step 4)
        ├── style.css         ← from GitHub (step 4)
        └── sourdough-loaf.svg ← copied (step 3)
```

Before you start ☐ Homework 1 page is live ☐ VS Code open on `Discussions`, not a subfolder ☐ Read the rubric (page 2)

CSS YOU'LL USE

```
.card {
  padding: 16px;
}
```

selector: which elements to style · **property**: what to change · **value**: what to change it to.
Every declaration ends with `;`. Every rule is wrapped in `{ }`. Group selectors with a comma: `h1, h2 { }`

THREE SELECTOR TYPES you need all three

SELECTOR	TARGETS	IN YOUR HTML
`h2 { }` type	Every `<h2>` on the page	nothing to add
`.card { }` class	Every element with that class (reusable)	`class="card"`
`#method { }` ID	The **one** element with that id	`id="method"`

The dot and `#` go in the CSS only, never in the HTML. An id can appear only once per page.

SHORTHAND

`padding: 16px;`	all 4 sides
`padding: 8px 24px;`	top/bottom, sides
`margin-top: 48px;`	one side

Reuse a few values (8, 16, 24, 32, 48px) so spacing looks consistent.

PROPERTIES colors, font sizes, spacing

PROPERTY	WHAT IT DOES	EXAMPLE VALUE
COLORS		
`color`	Text color	`#3b2a1a`
`background-color`	Fills the box behind the text	`#fdf6ec`
FONT SIZES		
`font-size`	Text size (`1rem` = 16px)	`1.75rem`
SPACING (THE BOX MODEL)		
`padding`	Space *inside* the border	`16px 24px`
`border`	The edge: width, style, color	`2px solid #8b5a2b`
`margin`	Space *outside*: pushes boxes apart	`16px`
`line-height`	Space between lines of text	`1.6`

Pick a palette first. Choose 2–4 hex colors that go together and reuse those exact values. Keep text easy to read.

GET THE PRACTICE FILES

1. **Open the class folder on GitHub.** Click **discussion-3 on GitHub**. You'll see `index.html` and `style.css`.
2. **Make your `discussion-3` folder** inside `Discussions`, next to `discussion-2`.
3. **Copy the image.** Copy `sourdough-loaf.svg` from your `discussion-2` folder into `discussion-3`.
4. **Paste both files.** For each file: open it on GitHub → **Copy raw file**. In VS Code, **New File** in `discussion-3` with the same name, `Ctrl`+`V`, save.

CODE ALONG

5. **Open with Live Server.** Right-click `discussion-3/index.html` → **Open with Live Server**.
6. **Link the stylesheet.** Replace the TODO in `<head>` with:
   `<link rel="stylesheet" href="style.css">`
7. **Fill in Parts 1–3 with the class.** Replace each TODO in `style.css`. Save (`Ctrl`+`S`) after each line and watch the page.
8. **Inspect the box.** Right-click a card → **Inspect** → **Computed** to see its padding, border, and margin.

STYLE YOUR HW1 PAGE

9. **Make `discussion-2/style.css`** next to your HW1 `index.html`.
10. **Link it.** Add the same `<link>` line to your HW1 `<head>`.
11. **Style it in three passes:** colors, font sizes, spacing, with your *own* palette. Add `class=""` / `id=""` as needed.
12. **Commit and sync.** `Ctrl`+`Shift`+`G`, type `Add CSS to HW1 page`, **Commit**, then **Sync Changes**.
13. **Check and submit.** After the green ✓ in **Actions**, open your link. Submit your repo URL.

Your CSS goes in its own file.
A `<style>` tag or a `style="…"` attribute earns **0 points** for the linked-file criterion, even if the page looks great. Put every rule in `style.css`.

DEV 140 · DISCUSSION 3 · CSS HOMEWORK

CSS Homework Rubric

50 points. Your page is graded on a **linked stylesheet** that deliberately sets colors, sizes, and spacing. Consistency matters more than polish.

CRITERIA	FULL CREDIT	PARTIAL CREDIT	NO CREDIT
Linked CSS File	**10 pts** CSS file is linked via a `<link rel='stylesheet'>` tag in the head. Styles visibly affect the page.	*No partial credit*	**0 pts** No external CSS file, or CSS is written inline/in a style tag rather than a linked file.
Three Selector Types	**10 pts** All three selector types (type, class, ID) are used with correct syntax and applied to appropriate elements.	**6 pts** Two of the three selector types are used correctly, or all three are present but one has a syntax error.	**0 pts** Only one selector type used, or selectors are present but don't apply any visible styles.
Box Model Demonstrated	**15 pts** At least 3 elements show deliberate margin, padding, and border adjustments. The spacing choices create clear visual separation between elements.	**8 pts** Box model properties are used on 1–2 elements, or all three properties (margin, padding, border) are not demonstrated together on any element.	**0 pts** No meaningful use of box model properties, or all spacing is left at browser defaults.
Color Scheme	**10 pts** At least two colors are applied intentionally to text, backgrounds, or borders. Colors complement each other and are not just browser defaults.	**5 pts** Only one custom color applied, or colors are present but clash or appear random rather than intentional.	**0 pts** No custom colors: page uses only browser default black/white/blue.
Overall Visual Coherence	**5 pts** The page reads as intentionally styled: consistent font, spacing, and colors give it a unified look. It does not look like a browser-default document.	*No partial credit*	**0 pts** CSS is present but styles are so minimal or inconsistent that the page looks essentially unstyled.

WHAT THE GRADER CHECKS, IN PLAIN WORDS

- ☐ **A separate CSS file, linked.** `style.css` sits next to `index.html`, and the `<link>` line is inside `<head>`. No `<style>` tags or `style="…"` attributes.
- ☐ **Box model on 3+ elements.** At least three elements get padding, border, *and* margin, so the pieces of your page are clearly separated.
- ☐ **Looks intentional.** Font sizes step down h1 > h2 > h3, and spacing values repeat. It shouldn't look like a plain browser page.
- ☐ **All three selector types.** At least one type (`h2`), one class (`.card`), and one ID (`#method`) selector. Each must change something you can see, so the class or id has to exist in your HTML.
- ☐ **2+ colors that go together.** Pick a palette and reuse the exact hex codes on text, backgrounds, and borders. Random one-off colors look unintentional.
- ☐ **The grader can see it.** `style.css` is pushed, the repo is **Public**, and you submit the repo URL. A missing or broken CSS file loses the most points.

IF SOMETHING GOES WRONG

Before you submit: open your live link in a private browser window. If your colors show up there, the grader will see them too.

YOU SEE	DO THIS
Page looks exactly the same	Check the `<link>`: `rel="stylesheet"`, and `href` matches the file name. Both files in the same folder?
Some rules work, later ones don't	Look for a missing `;` or `}` just above the first rule that broke.
A class rule does nothing	CSS needs the dot: `.card`. HTML doesn't: `class="card"`.
An ID rule does nothing	CSS needs the `#`: `#method`. Did you mix up id and class?

YOU SEE	DO THIS
A color won't change	Hex needs the `#` and 3 or 6 digits. VS Code shows a small swatch when it's valid.
Preview doesn't change	Save with `Ctrl`+`S`; it only reloads on save.
Styled locally, plain on GitHub	Commit and sync `style.css`. Names are case-sensitive online: `Style.css` ≠ `style.css`.
Can't tell padding from margin	Right-click → **Inspect** → **Computed** shows the box diagram.
